## Evening Brief

Date: Monday July 27<sup>th</sup>, 2020

### Weather Summary

**\*\*\* High Risk for Lightning Southern Idaho, Far NE NV, NW UT on Tuesday \*\*\***

Drier air moving into the south will decrease thunderstorm activity over much of Nevada and Utah however; the lightning threat moves north into Idaho/Wyoming for Tuesday. High Risk for Lightning has been issued for southern portions of Idaho on Tuesday, as well as far NE NV and NW UT, while any storms further north and east will be wetter, over marginal fuels. Any leftover showers over Wyoming tapers off Wednesday, with a significant warming/drying trend later in the week into this upcoming weekend for most of the region, as a high pressure ridge strengthens over the Great Basin.

Winds are expected to increase at times over southern and western areas of the Great Basin by mid to late week along with very warm and dry air moving in. Triple digit temperatures are possible over the northern valleys by the weekend. Low daytime RH and poor overnight RH recovery can be expected by mid to late week, and will have to be monitored, especially after a couple days of new lightning. The potential for holdovers will be higher in some areas.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light to Moderate Initial Attack Activity New Fires and Acres: 65 fires 931 Acres;
National	PL 3	

---

### Fuels/Fire Potential

Monsoonal moisture has brought multiple days of high humidity and mostly wet storms to the southeastern portion of the Great Basin. As a result, fine fuels across southeastern Utah and the eastern portion of the Arizona Strip have modified, with ERCs much lower than were observed earlier in the week.

Most critical fuels are across western Utah and Eastern Nevada where precipitation has been sparse over the past few weeks, and several days of hot/dry conditions have pushed both 10-hr and 100-hr fuels below 5%. Grasses are mostly cured below 6000 ft in nearly all areas.

Sagebrush live fuel moisture across the southern half of the Great Basin have dropped below 100%, and below 75% in the far south, so in those areas the brush is becoming consumed as part of the fire environment. Northern area sagebrush moisture across the Snake River Plain has also dropped rapidly to near normal late July levels.

Fuels should steadily dry thru the end of this coming 7 day period.

## Resources:

### Aviation within the Great Basin

- 1 VLATs, 4 LATs, 2 Scoopers
- 25 SEATs, 0 LP, 13 AA, 3 ASM
- 9 Type 1 Helicopters
- 14 Type 2 Helicopters
- 21 Type 3 Helicopters
- 0 Helco's

### Crews Committed within the Great Basin

- 16 IHCs / 3 Available
- 25 T2 IA / 7 Available

## Current Incident Details
